Richmond, London, S. W.
12 March 1862

Dear Dr. Gray

Dr. Hooker kindly showed me your note upon the American about Betula alba. I think you must have overlooked it, as I found the page right in the copy which we have of your paper as read — (p. 442 Ann. vi. N.S.). It was merely a query why Betula alba was included along with Corylaceæ, Salicaria & Spartium as American plants & W. Europe. Salicaria extends according to Ledebour, too, as far E. as Altai Mountains. Another species to add to the long list is Rhus glabrifolia which I met with first 12 yrs. ago in W. Ireland & which occurs in a few places as the continent also. Apart from the Betula you will observe

Do you think we could manage to get specimens of the fruits of your species of Nyssa? They would be valuable for comparison with what Prof. Asa Gray calls Nyssa from the Pacific Slope.

they are all apetalæ. Thus their
peculiarity here is explicable more
easily. — My attention was especi-
ally directed to your important
peculiarity having been struck
over some of Prof. Heer's work & proofs
of the Tertiary Flora & the Atlantis
hypothesis which he & Lyell maintain.
I have been tabulating a good deal about it & read Lyell
chiefly, perhaps & his post, abstract
of an address upon it.

My comparing finite can pro-
bably be direct you to point in the above
essay upon a No. Pacific migration.
— I send you accordingly a
proof of a Linnean Soc? paper
upon Antholiza in which I take
the liberty to mention your name
— quoting from your admirable Text-
book. — (the book?)

With regard to this letter, Dr. H. was
more wood sure of each [illegible]
use as to any portion our English
students. If so? he very satisfactory
could not be arranged. I thought
then it might need just a little re-
vision as to the American illustrations
employed, but looking at it again
I doubt if it so? be materially improved
in this respect, — using as you do
Gray's names & Common species.

Perhaps the sequence to the
order might (in case of our English
students &c.) be based on the Gen. Plantarum. — Dr. Lindley's
Elements? books so? mainly stand
in the way of wide use of your text-
book in London probably. Of course
any class & Sc. hold it up as
the very best Manual &c. Dr. L.
however is an autocrat in London
influence. Where many of our students
go & this might subject to them
a prejudice in using his books.

Pray forgive me troubling you
in this way

Very sincerely yours

David Oliver.

Richmond, London S.W.
viii. 1862.

My dear Prof. Gray

I have allowed a shameful long time to pass without replying to your very kind & interesting letter of the 14th April noticing the matters of "Author structure" & also the publication of your Text-Book in England.

Since the receipt of yours I have been busily employed with my lectures - up to near the close of July, & this in addition to my Flora Antarctica work that it was not easy to write letters, - & since my vacation began - with August - I have been among the North of England Mountains & away from home. — × × × × × ×

In reference to the work Dr. Hooker rather discouraged me from his opinion that it is hardly sold out of London, - & in London - having already Newport's work & Bentley's (Assistant Prof. in King's College) I confess I do not feel sanguine about it. But if there were any chance of it being worth

a publisher's which I shall be very glad to accept in order to obtain for English students. You quite know me with your kind permission. Of course if I find it feasible & desirable I shall send you the sheets.

After all I apprehend but very little alteration is required. Perhaps the explanatory part might be more directly based on Boolean & Benthamian plan.

As to the authors I do not see that your explanation of authors being generally introduced — by reference to a quoted Lamina — is satisfactory.

So far as I have had opportunity of studying authors over I find the views mentioned in the proof which I send you to be satisfactory. You will see rather amused to see Mr Bentham's remarks under Glossotherium in his paper on Balbaceae &c. in Linn. Journal VI. 117-8. also page 123.

I remain

very sincerely yours

Dan.l Oliver

Richmond, London S.W.
19 XI. 1862

Dear Dr Gray

Many thanks for your kind note of the 27th ult. & the enclosure — tracked from Ann. Nat. Hist. Les. — papers duly reach me either addressed as above (my home) or to Royal Gardens, Kew (my place of daily visit). It is very kind of you to offer to help me with Ann. & Mag. for Nat. Hist. Rev. The Bot. Nobleography of that Journal might be considerably trenched, — at any rate in the way of giving fuller notices; & I dare-say I miss many things. The best plan towards it I find is to note things pretty much as they come to hand. I think I sent you three wood-drawing Nobles! a few days ago also copy of the author-note & short paper on Lardizabalaceae & Ranunculus &c. I have just worked up a paper on Loranthaceae with Synopsis of the genera &c. Several points of interest are to note tho' nothing very new. —

Mr. Rees' mistaken separation of Ericaceae from Loranthaceae, also his account of the seed of the latter in Linnl. V.N., — — Sectioning of Loranthus, — a new Australian genus near Viscoidea of Viscum (including Viscum cornifolium & V.? subaveum, F.M., & V. nigrum Hook &c.) — identification of one of Fendler's (& Lee-mann's) plants from Venezuela with Antidesma of Roxb., — amending the genus, — curious relations of the Cala-Eu- & Hyphe-phylleae, leaves in Antidesma & Lepido-corus; — hypertrophied stamata of Breweria bermudiana, &c. &c. are among the points noticed. — Do you consider Griseb right in referring Sm. & W. Indian plants to Arceuthobium? I take them to be apiphyllous species of Phoradendron, in which genus it may be useful to allow the slit of the anther-cells to exist across in some species ('1-celled' anthers). And I have some doubt about his Exocoleus Wrightii, — whether rightly referred to his Chilian genus. I do not certainly separate it, however.

I suppose St. Hilaire's Cestrum laurifolium may have been a Phoradendron. I am thinking of going on to work at the question of analogy or affinity of these things with Loranthaceae. There are certainly some remarkable points of resemblance between them. The ovule affords some singular anthers such as every one knows. I shall be curious to learn the result of the yeast cutting-up of the Loranthus flowers. The evidence of these seems not a little strengthened by the highly specialized character of their normal anthers.

I remain sincerely yours

Asa Gray.

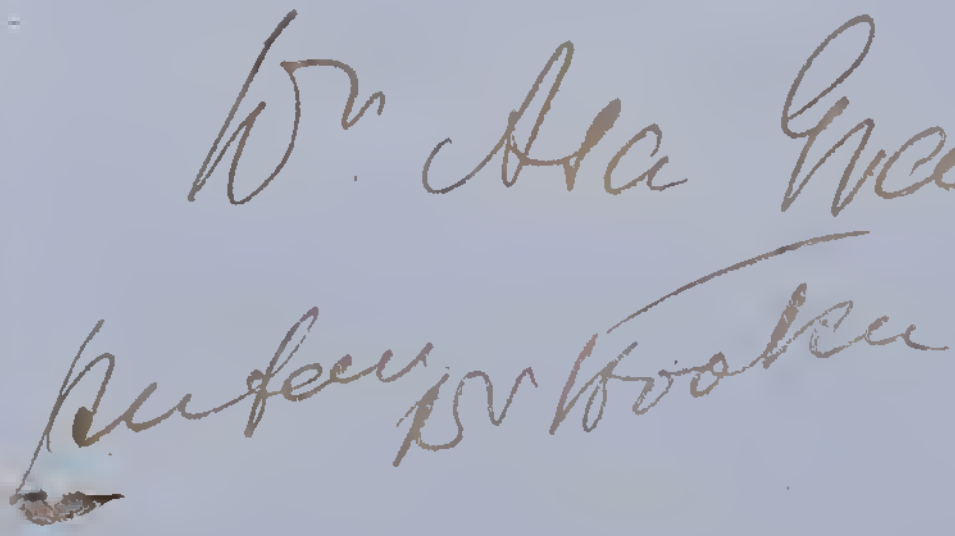
Kew. 2 Dec.r 1862

Dear Dr. Gray

Pray do forgive me troubling you Kew. — I shd be really obliged if you w.d kindly look at a few of Flowers of Ch. Rhododendron Flowers & see if stamens are always 2-celled. — I think the cells are sometimes confluent. The point matters in itself, but I think Ch. Rhododendron are hurt by only 1-celled (in older

Some which Kirkbach in
H. Mit. Co. Indien (814-5)
but (wrongly as I think) in
Acanthobium. — I am
allowing them to Phyadenda
authors 2-celled or confu-
sion 1-celled. — In the
Acanthobia the flowers are
not immersed in the
cavities of the pericarth
of the ♀ is minutely bi-
fid. — How may or
not Endlicher & Koch have

under our own self-know
a minute or so for them.
Sincerely yours
Wm. Oliver



Answd
May 11

Richmond, Lawn, S. W.
24. iv. 1863.

My dear Sir

The time for the delivery of my Summer course of Botany coming round again recalls the difficulty which I fixed in beginning in recommending a Text-book to my Class. I told them your "Introduction" is the best, but there is a difficulty about their getting it; indeed this very afternoon I have a note from Mr. Walton (Chesh.) W. & Maberley, publishers to the College, saying that there are only 25 copies to be had in London! Where they have been stored. I think this fact is quite open to question the publication of an Edition slightly altered for use of English Students. They do not reproduce it however & sell at the very moderate price at wh. it is now sold. The suggestion which Mr. Walton makes is that of another Ed.n be soon required in America when 20 or 30 shd. be slightly altered, - & that Students of both New & Old World, - & that he shd. arrange for its publication sale in England, taking proper pains & giving it publicity, &c.

As they contain a distinct Edition in

England I shall be very glad & W. & M. I think w? be willing to purchase electrotypes from yr. publishers of the engravings provided they were willing. That the difficulty is as I say to complete in price with yr. American Edit.? if the books be independently bought out. Perhaps some part might be advantageously inserted & used. If you think yr. publishers w? assent to sale of copies of the engravings I might proceed to send out a copy or two of the book omitting what I think c?. be shared with least loss & noting perhaps (with all deference) some alterations & transpositions here & there, & then submit the whole to you before going further. That perhaps this maybe the alternative only in case you think yr. present British edition last sometime or prefer to keep it much in its present form for sale in America.

Should any pecuniary advantage H?. such accrue from the sale of the electrotypes I shall of course hear from you respecting it. If you can spare me a word or advice sometime about it it will be very kind of you.

Mr. D. Hanbury & I have been busy upon W. African specimens. We have had some excellent material in spirits, with colored drawings. — How curious the pulpy axillary covering! In many if not all the W. African species it seems double, — the inner closing over seed & bud, & arising at thickening of the pedicel (axillar) the outer partially or wholly investing & from the pericarp (axillar).

I sent you a notice of Dr. Hooker's Botanical Magazine paper in vol. I refer to the Zygnemaspecimens question. —

Very sincerely yours

Danl. Oliver

Prof. Asa Gray

I enclose an acct. mentioned by Dr. Hooker in his letter. —

ramuriferina, - calidaria
minutum.

Yours very sincerely
Dan'l. Oliver

I find I must send the
Lichen book by some other
course, - not by post. -
So I detain it for the
present. -

Richmond, Va.
1. V. 1864

My dear Sir.

I send you by this mail
a Lichen book for beginners
in Botany. The Reverend
will tell you how it was
brought about.

In the last No. of the
Ann. Nat. Hist. Rev. I put a
brief recommendation upon the
matter of the Lichenes and
Hepaticae? I have not re-
ceived any separate Copies
as I put I have not been
able to send you it. In-
deed it is hardly worth my
mentioning. My lectures
begin tomorrow.

I have been examining
some interesting plants

from W. Prof. Spicer Hanus
a little notice for the Linn.
Voc. I have known
(– Polygonum – Amaranthaceae
Phaeanthera –: Rhaptopetalum
an Olacaceae with 5 stamens
minadelphous, – 4-celled (completely)
& 1 ovule in each cell.
—: Lepidobotrys, Lepidobotryaceae
with 4-5 petals & 5 stamens
& seminate ovules, –: Octo-
knis, Hypnaceae with
4 celled ovary & nearly hypogy-
nous stamens – approaching
in habit Scrophularia & Ole-
aceae &c.) — also a
fine new Parokelia, the
3rd species, – I believe Madagas-
car & Madagascar, & Guinea.

I have been busy in
Kew W. & Harbour because
the Rocky Mts. Herb
kindly forwarded by you.
Ceanothus No 121. I did not
match in the Herb.
122. Ar. Nev., may well be regard
as var. of A. sparsiflorus as you
suggest.
126. I do not find authentic
specimen in the Herb either of
A. Fayii or A. Shortii. I do
not see how A. humilis, Gray,
differs, – but I see you include
them in your Synopsis
167. S. debilis, Engel, – is this
not a form of S. rivularis (Hyper-
borea)?
Senecio Serra, Hk. differs mainly
from S. Kingsbeans in its foli-
bus amplexicaulibus, – paniculis

Richmond Landn, S.W.
3. XII. 1864.

My dear D'Arcy

Unspeakable Joy that I am! I believe that I have seen Hanbury in a very flattering notice in the American Journal of Science of which book - "Elements of Botany" - published last Spring. I was rather startled from up there are some hints I must endeavour to mend in a second edition. I have just had Dr Lewis (Collector attached to the Royal Gardens) Johannes & Hancorn & collected plants through my hands, arranging & distributing them. I have got them now nearly ready to send out, though we may detain them until my assistants get more of

he had a new genus of Labiatæ near Hoist & Hawkins, - a low, woody-looking thing, with minute orbit? & dil? flowers. A Euphrasia Euphrasia parodya a. A. minuta - Leandi Scrophulariaceæ. Amphicarpæa Bolanderiana; var. (perhaps var. of A. monica). Adenandra, Roxiana, Rutaceæ, Asplenium, &c. - A series of specimens sent to the Jardin Botanique - Prof. Decaisne - some new types of Mimoseæ (only in part & no duplicates) &c. I have in hand some botanical African things, which before me at the present moment a g. n. of Faurieæ & another Rhizoneæ which had not missed in amongst Proteaceæ. One flowering specimen resembling a Flora of Trop. Africa & I shall have endeavour & do something more of it. The new affinities

Falconeria N. to Indian (Nepalensis
Khasi, &c) plants made up into set
& accompany them. The latter
from part of the material Indian
collns. secured from the late
E. Ind. Co.'s, — the last of which
we shall be glad to supply when
as their preparation sadly interfere
with the regular routine
work of the Herbarium.
A numbered Catalogue of the
Griffith & Wallich Herbarium
is preparing for printing, & a
similar Catal. with which to hope to
send out with each set of
Pls. Falconeri. The determinations
are mere approximations &
not critical exactly so far
as the Dr. Thwaites has proceeded
with the new "Flora Indica".
The Japanese plants I have
named (exactly the same numbered
specimens purchased for Mr. Maries
& he sent out at same time)
They are in good condition &
generally the specimens are very
satisfactory. You will receive an
exact set of them. I find
amongst them a few of J. & S.
genera not previously in our
Herbarium, as Rhodotypus
Corchoropsis, &c. Here are
several Indian & Himalayan
plants not previously received from Sikkim
& no doubt some new species,
but species & critical genera are
sent out terribly under their
proper name. I cannot afford
the time at present to examine
them carefully. A few, however, I
have noted in a little memo
given to the Linn: Soc.'y amongst

of some of these Ferns, as yet unnoticed — are often perplexing. Mr. Newham is at Keppel Bay. He tells me Lastrea is found in Darwin. — Speaking of Acrobas I am not sure that I shall not have to unite Acroba & Marginata, notwithstanding the S. American species of the latter genus & the old Acrobas are so various in texture & pel.

Very sincerely yours

Wm. Oliver

Herbarium, Kew
24 Feb. 1865

Dear Prof. Gray

Dr. Hooker has handed me
for inquiry about Mexican
Californian plants.

Your parcel contained about
18–20 sheets. – American
varieties, but I do not
find amongst them any
of the names of. you
enumerate.

Mr. Bentham asks
me to tell you that
Nos. 2349 & 2350 both
belong to Glycicidia / Kunth

which he has added for
Lonchocarpus maculatus
& three others. Since we
went up last we have
seen a large lot of dried
Indian plants for sale
from Dr. Anderson of Calcutta.
Shall we make a special
search? They will fill a
lot? large case

Green berg Briones & Co

D. Oliver

Kew, London
12 Sept. 865

Dear Dr Lucas

I have to acknowledge the safe receipt of the bright collection sent by the South African Museum. I shall see that they reached us in the best order. I am very glad to have added these beautiful species to our collection. I have just been looking over and arranging Saunders' beautiful collection presented by Mr Wallace and I have put the (220-230) species together. I cannot name exactly them as I am very busy & I have to name many of them unnamed in Museum collection by me. I shall be glad to have your determinations. By the way

I have mentioned your name to Mr Edgar Reid the master of his ship your services could thus be made available. Meantime he is in a good school

Believe me
Yours very sincerely
Wal. Hooker

amongst these Sandwichers I find a Begoniaceæ Hexiereae (and affinis which I think maybe worth while figuring if not distributing) Basically Fevel, however, I should like to know if you have anything about it. It is in habit wholly Begoniaceæ of the Folk Lordamerican & not remarkable, [redacted] Hexiereae, except in the occurrence of 5 minute petals alternating with the 5 calyx-lobes. In the Cobæa tube beneath ovules — this is filled with the 5 petaloid filaments again alternating with the lobes. Ovary 3/3 adherent, 5 cells Reflexed stigmas, [illegible] 5 cells at base & collateral placentas, ovules? Others above, Capsule dehiscing by separation of the carpels at base — No fleshy tissue at base of [illegible]

Thus have we had [illegible] which has befallen us. We have I fear William Hookus deceased has met about a week after it took place in a romantic valley in Derbyshire where I was spending my vacation with Mrs Oliver. We returned almost at once to find, alas! Dr. Hooker very ill & rheumatic fever brought on by cold caught by his father's bedside. He is still very poorly. Some days he is tripleter seems fairly recovering, but again he gets terrible back. Last was he is at his old friend Dr Campbell's at Notting Hill. When recovered he is ordered to call at my house (at Acton) but I do not know he carried. I fear he has not been well since & I blame himself that his complaint is one which is likely to recur in his case.

Kew 21 Sept 1865

My dear Prof. Oliver,

Here must have been some
most unfortunate miscarriage
of letters I fear. I cannot
doubt that Mr. Hooker
are satisfied that their account
was sent to you & Sir William's
decade. I do not recollect
actually seeing them say as
much but from a casual
reference I inferred it - However
this & his readiness
you must have seen Lord
Aberdeen & Mr Wise became
aground of the Indo-Coast Indeed
& note I am asking your
opinion for Begoniaceae &

I posted a week or two ago regret I should have
referred that Dr. Hooker has indeed been very
seriously ill rheumatic fever, last was doubtful he
would be recovery. He & Mrs Hooker are at
present staying at Buxton (Derbyshire) where he
finds it bitterly cold as I learn from a note
which he sent me a day or two ago. I shall
send yr. note on to him as I will serve to
explain in case they have been wheeling & learn
from you in reference to his illness.
The Directorship has been offered to Dr. Hooker
so that there is no vacancy at present in
that direction. This might have been regarded
as alluded answers. test
Mr. Bentham is well but work again (he's away
for a few days on a visit in the country).
Yours very sincerely yrs

D.O.

How shall we send St. Helena & Sandwich Pl.? - Carly
2 not large parcels
00

Acton near London
30 Oct. 1865

My dear Sir,

Yours (enclosure) of the 16th reached me today. I obtain existing Hillebrand's collection I found it almost impossible to examine his plants critically - for, existing in special cases, I take it my first duty as Keeper of the Herbarium is that our material made available for examination

of Lindley's idea of Datisca cannabina? The leaves too are identical in Datisca & other plant. The name Mannia you will find in Gen. Pl. i. 309. - a genus of Swartzia. Burchell's coll. kept me busy & am busy to occupy several months. Last year I have been comparing & copying out his valuable St. Helena plants gathered 1810-15. How are you circumst? in regard plants of this Isl? Have you a few duplics. I should be glad to see you have the best of them. Hillebrand did not send many duplics, but the best set shall be sent to you. I trust Mr. Mann will not consider that I have done wrong in giving Hillebrand his curious Plants - I would have liked a set myself. Have you any dear Sir, very sincerely yours

J. D. Hooker.

by the botanists who visit us - & bruising the plants into their pieces & sections of pieces rather than should much time on specific details - which is beginning at the wrong end.

So that no doubt many plants which you have already described in Proc. Am. Acad. remain yet to be identified in the Collection & must stand one shall be of your kind help in determining them.

The Mentzeliad cannot I think be in Hillebrand's set.

as Mr. Mann's conjectures. Made a rough list of the collection - several of the species I daresay I or I turn over for determinations, - as Mr. Hillebrand I presume keeps a numbered correspondence? - The Nephrodium I have had placed by Mr. Pilch & read a short notice of it on Monday at the Linn. Soc? I have called it Hillebrandia. It comes near the genera, with wh. it agrees in habit & general aspect, - but it has ovarium apice hiatus - & ab. 1/3rd pet. - besides petals alternate with the sepals in both of 4 & 5. I take it as good confirmation

Prof. Asa Gray

for Dr Hooker.

Kew 27 Nov. 1866

My dear Sir,

I am much obliged by your so kindly inquiring about Lake Superior minerals on my behalf. I have since made inquiry in another direction & learn the difficulties in the way of acquiring at a moderate cost a series from the Copper country are not worth any effort trying to overcome at present. There are many other things in the U. States of which one day I shd like a selection for my cabinet, but mineral collecting is merely an amusement with me & not a serious object.

Your capital things

are safely to hand & very valuable ones. I have only Journals of Brodeli's Cape Coll.ⁿ to finish off & prepare for distribution & then I must have leave to run over Lindley more carefully. The Grass - Bellum 53 - I am sending to Col. Munro to day. No I sent it & post yesterday. To day I send him a box of Cape Gramineæ to name for us. Col. M. read an excellent paper on Pomeridea at our last Linnean Meeting. + I think we shall be able to have your set of Brodelis Calenden ready by the end of the year.

I remain my Dear Sir
Dear Oliver

Durham 7. II. 70

My dear Darwin,

Pray do not thank me for troubling me. It is a real pleasure to do any such help. — I should not regard the 2 Primroses as the same. As to flower-structure I cannot tell as we can name the 2 states but in terrestris. Not apart from the indeterminism which does not work as his decisions are under impact of E-complexion, the form of the leaf is different. In E complexion

distinctly crate rounded at base
in E. pyrolæfolium obovate or
rotundato-obo vate, broadly
rounded at apex. — In E.
corymbosum the petiole is broadly
winged.

Even the leafy glabrate
form of E. pyrolæfolium are
larger & broader than in E.
corymbosum.

Even Richard Thurs
A. Olliver

Name admitted as syn. (Proc. Nat. Ac. 1870. 283) certain characters indicated by Mr Black (not by Prof. Oliver) 9. iii. 1871

by dear Mr Gray

Sedgwick specimens. Two authentic sh. at Kew — I see Mr Bentham has marked "? H. reperita" a sheet bearing weights 1517 & 1521 together with a plant & two by Mrs. Broad Gray. Kew are not Nos. you cite.

— Your excellent Polemonium has only come. I carefully stitched all down in accordance with the hope [illegible] it on brick-shelf — I have 2 back your sheet. One (& Platyceras in fascia) which you labelled "Salix Hookeriana, Gray mss". I do not find identity with any species. We have all Kew Platyceras &c. Kew Mus is

apparently Euphilia "Near Monterey, Dr. Edwards" 2.

a Journey and in
Hobart. — If this do not
enable you to name it send a
name.

very sincerely yrs
D. Oliver

Do you find the mounted plants selected from Bot. Hook. & Bth. which we send at time to time worth freight & time of looking over? How & when I sent in a good many, some, African or Mex, — the title representing your interest.

Capt. Abra. Gray

assistant. Will the Rev. Dr Gray be good enough to forward the enclosed letter to Mr Swinhoe at Amoy. I have asked Engelmann as to this, but if you can contribute the 5/- I shall be very glad to help.

Yours sincerely
Alfred Russel Wallace

Mr Wallace is back to work after his recent (as you will see from the above) long illness. He has written me a kind letter – one of Lady Hooker (and Dr Lyman's) kind friends (in Eng.) [illegible]

10 Feb. 1871

My dear Dr Gray

I have delayed a few weeks writing to you till I had note with the Orinoco Expedition – wishing to show it to Mr Bentham before despatching. Unfortunately I have still not. The pressure of business pressing claims & author-calls make it impossible for Polygalaceae & such like genera after all the

best place for it. Loxopterygium & allied genera of Sapindaceae won't do. Mr Bentham queries obetkin it may have anything to do with Gaudichaudieae (Malpighs)

I keep the scraps, - but with related A at a loss how to. We have a lot of plants related to 466 Hibbertia / & some books for you. The Cotton I must see about sending Kew (?) so soon as the Office people send us bolls of African flora - which has been out some weeks.

By the way, what do you make of differences between Diospyros virginiana & D. Lotus? Mr Strobus who is making a careful & thorough revision of the American ones so likes our specimens of Lotus & seems to find constant differences. He is sending a referee copy in your part of Lotus & I mean me I must

Hms "Rose"
4 Oct. 11

Dear Dr Gray
Allow me to introduce
J. Melville Esq – a
Gentleman (as we
say on the Linnean
Certificate) "much
attached to Botanical
Science & curious in
human & Polite

Mr Melville is about to visit the Southern States & wishes to take a stock of anything I wished there. He will be very grateful to you for any hints I like to give him. —

Very sincerely yours

Dear. Olivier

Mr. Decaisne sends us / a Eastern Rubber / what he thinks a new gen. near Galax. L.

13 Oct. 71

My dear Dr Gray

We sent off on the 9th two cases for you of plants in continuation of previous sendings. Some & some, amongst the mounted things turned out of our Herb. You will find a few more things, often rare, — put aside for you as they turn up — So all the buds ought to be 'gone over'

The parcel contains

1.) Parcel sent by Mr Mills for you long since

2.) Vol. i. Geo. Plantarum (Which you wanted a copy for a friend) (c Bentham)

3) 6 Nos Journal Botany (c Hooker)

4) 9 Nos Retreat (Baker & Saunders)

5) 11 4. Genera Plantarum (c G. Bentham)

6) 11 1. Vol 2. Linnean Trans (c Hooker)

Very sincerely yours

J. Oliver

or Mercure sent hors d'analyse.

The bundle of books we

have for you weekly Nos

& send Mrs Smithsonian

&c. altho the Brand have

not yet sent down Gr.

Vol II of Asp. Flora — I

shall send it (the bundle)

down to-day or tomorrow.

Nov. 20. 1871

My dear Dr Gray /

Received — through Mess^rs Darwin — safely & sound. Though not yet unpacked. Many thanks — as also for the good specimens of Virginicum.

You said in a memorandum which reached me, some months ago that you were sending along with the Cuban Palms (which came while I was away in July & August) a parcel for Hewaiies. Hier I know nothing about. I must to Wesley

(the Smiths' agent). He couldn't tell unless it had left Kent for the Observatory at Richmond.

I am writing now to the latter. —

Ken, lastly, we still have to write Lene a pencil of Wright's Cuban Fuels — which I intended for Fries, — but we have had no instructions as to its disposal that I know of.

Did you get our last Miscellaneous Sunday all right?

Ever lovingly yours

D. Owen

by Post on 27. XII. Mr Bentham has sole charge of its finance. Mr Clarke gives 7/. a leo (& postage in addn /. —

/

Abt. Cuban Tunji. I have communicated with Mr. Corke as you desired & as he thinks 2 dare.' of his Tunji 21/. each. & his Handbook 24/. I accept for you & send the cheque & leave to day. His return we may reckon for you a week hence Wednesday. —

28 May 1872

Your arrangement with Booker about Tuskegee I do not know.

2/ Cautionary letter / Reflective from H.B. Keen — the Mountain Sec.y — among the Cradles of which are now & then found bone specimens — often rare things —

Herb. Dr 11 Dec.
'74

My dear D. Gray.

Dear Kennedy pr parcel
of Lemmon's Californian
&. safely to hand.

His Silene 172 may well
= S. Douglasii of Columbia
river, — His slightly less
tuberculo-truncate & 737
may be a var. of same with
slightly broader cauline leaves
S. multicaulis, fruit does
with S. Douglasii ——

Have you a name for the Clerodendron #192 of Wright "b. Texas & El Paso" coll? (= Carter 1172?).

And Euonya, Sov. (Celastraceae) Have you a seed to share?

I sent my last note on Physalis, made pencil after you received

the dark day of the Lunar. Sor. may have reached you all right & helped you.

Very kindly

D. Dower

Mr Bentham is just sending us Dragoneas for Gen. Pl. —

Ron & Stoates occupy himself with Hypsineas for Dawe

Herb. Kew.
24 May 75

Dear Dr Gray.

We brought sometime
ago a collection of
Chilean plants brought
over by Mr Reed —
which included many
of Philippi's names —
with the condition that
we sh. distribute of the
duplicates for his benefit.

My assistant Mr
Brown has made there

up with Lehr & I venture to
believe me (503 Rh.)
for you in the change
you might come to love
it. It is the 2nd. (The
N. American took the
first) 3. 4 & 5 are sold
the price [illegible] the 30/.
per 100. They are all, or
nearly all named. —

Do not hesitate I beg, if
within your care for children
stamps. — A thousand
thanks for Mr.
Sargent. Very truly yours
Dolicek

24 June
1875

My dear Dr Gray.

Can more to land this
day — or rather yesterday —
& each today — for the
last of Chili plants
which I had received from
you. I don't like sending
them off alone. Lee
has been so busy with
her matters that not

— I have just had the specimens made & been there and [illegible] 20 bundles of Grass plants ready for me so that we may have a case made up shortly.

Have also 3 of Forbes's desiderata. The other is not forthcoming.

Best thanks for your kind help for the £7.11— Rec P.O. Can.

(or cheque?) Very best wishes

£7.9.0 best etc.
Will this will do)

D. Oliver

Little progress has been made in consolidating the Hook. & Benth. Herbarium — & so unable as to reject numerous duplicates — during the last year. The final destiny of Grey's herbarium has not been [illegible] some pressing work so that I have not much in hand to add just yet to the Chili stamps.

rather thanly glaucus.
I wish to accede to
as Almeè.

Very Sincerely yours
D. Oliver

29 June
1875

My dear Dr Grey
His morning we send
off to the care of
Messrs Crater, Liverpool
a Ship for you, two
cases with
1/ Certificates H.B. &c.
2860 Lbs.
2/ 1 Seed Chilli plants
purchased by A.G. (& paid
for)

& 3/ Cantin & Deblicath (
Hab. Ark. & Neuth..

Gen. Nov. ~~nov~~ near
Cactaceae. middle Eoc.

Our Same had Some
interesting Comps collected
a Dr Shearer in the
Kinkiang district in
interior of China.

a Curious n. gen. Compositae
& another Verbenaceae.

I lol any assistance —
both kind — Shall be glad to draw
up notices of results ob.
with appear in Journal of
Botany. Shall send
a Shee[t] ~~to~~ of Linnodendron
which Shearer did not
clearly recollect circumstances
of Collecty but thinks native
in the hills there. Has
the Station of the leaf very
dark & under surface

21 April 1876

My dear Dr Gray.

I see dead off today a
good-sized case containing
three tiny wicker stools
very like one of our brass
Benaresian. It goes
to the care of Messrs Bieber
& Sperl for shipment.

The case contains:
Field set of Reflectors

of the Socotran Island
Herbarium of the late
Rev R. T. Lowe — a large
Collection with his own
labels — often valuable
in the case of the Medicinal
Specimens. She probably
Lacks his "Flora" so far as
it goes.

2. Set of Moroccan Plants
Coll. Hookfil. & Ball.

3. Set of Canarian Plants (Lower
Macaronesias) Plants Coll.
by Dr Bolfour on the
Mount Teneriff.

Box shall be placed
to Credit of safe arrival.

Yours very Sincerely
J. Hooker

I believe the Count
has Specimens
Abyssinian — &c.

29 Jan 1878

My dear Dr Gray

The Rev S. J. Whitmee,
late of Samoa, desires us
to sell some 1/2 doz. sets of
Samoan plants which he
sent home & which have
been named & made up by
my colleague Baker.
Mr Whitmee directs me to
offer set iii for 30s, con-
taining 274 diff. at 40/
per 100. Baker thinks
well of the Ferns. Kew

are a good many here
who can't take
type. If you take
them I will work
it for you. The account
shall go direct to

Rev S. J. Whitmee
57 Dacre Park
Blackheath
London. S.E.

Yours very sincerely
D. Oliver

28 Feb
1878

My Dear Darwin,
I have been lent
Clarkson — who called
at Kew today &
told him you wished to
have a cut of his
plants. I have
left it packed in my
hall 274 Piccadilly
& as Mr Co-ocks

Hon. Secretary, it will make about £5.10. Not £3.10 as I see noted upon card. — I suppose he had used the postal box to forward with rest box? —

I have just had a cradle from Mrs. Chisam Charles for our coll. by Schweinfurth. — interesting because named

Yes. — Number.

Yours very truly

O Moon

21 Jan '87

My dear Dr Gray

Here goes at Henderson Ker-
Jackson letters this
morning is ready & only
awaits some steamer
or other. Hurrah dear,
the letters, it is about a
week from this date.
As it is backed I think
not enclose any small

accumulation — which
includes nothing important
etc. — Hemsley sees
the enclosed memo. for
you.
Mr Beckham is at Amaryllis
& says that he sees
three seeds — which probably
he thinks, constitute dis-
tinctions. Yours ever Richards
D. Oliver

26 Aug
1852

My dear Dr Gray

I do not recollect whether I acknowledged the safe receipt of the 17th July – pick as fine starting as any early holiday – the of the good packet of dried plants – with numerous rare things as usual – you kindest sent us. So I may

for the first
time to spend
a few days
in the
Country with
my friends
D. Owen.

the letter you did me the
honor. I have been again
in France: visited at
Auxerre, Nevers, La Charité
& Bourges, as principal
centres - not been pleased
so much as last year, -
& then, for a month I
never ceased to be ill & I
missed very much steel
as the Lees for about a

10 Jan 1889

Dear Mr Gray

Let me congratulate
you most heartily
on the very high
artistic quality
of your recent
etching. I read about
it in the Athenaeum

very feeble & cough
keeps me down.
I see him every day or
he sends down to town.
Yours ever sincerely
D. Oliver

26 Feb'y 84

My dear Gray
Yr note of the 5th to
hand this day: many thanks
for the labelled Lycoperdon
also for kindly enquiring
after Mrs J Harvey's health.
As to Gray. Herb. —
Lepuncinae were omitted
in mistake during the
hurried time we
were there.
We have examined

the comparison & relation
for them, especially the
Islands, - although the
Islands were not
included in the last
Act. We can either
send off that remain
dress & declare war
on the Union until
the Islands for the Islands
finished. But then may
not be for sometime to
come as the work is
some distance.

If there be a Euro-
pean ship of the line
here for a day or two
for which they have to
pay which may speedily
abscond to.

The Durham continues
much the same. He is
as busy in his "drawing
room" as ever, - sleeping
in the same room. He is

Have you had the
last I sent you?

14 April 54

My dear Dr. Gray

I have only two
sets of Ferns Plant.
in stock, Equisetum, Rat
ii, with col. 41 of the
whole series. Net
price 7/. per set.-
(8/. less 7/. 5%. cash).

Col. 5 to 10 you
can only get

with some bookseller
to look out for them
in Edinburgh. —
There are 4 more to
a volume, & the last
last issued, Dec. last,
is Pt 2 of Vol. XV. =

Thus
Now making 10 parts at
7/- net, - a tidish bill!

Remittance of penband
& for Beatham
also looks like it & also
is at present outlay
on plates & printing. —

I saw W. on
Saturday last. He is able
with help to walk downstairs
& have a ride in closed
carriage — but of course
very feeble & unable
to get from his chair with-
out assistance.
(+ at times)
Yours
Dowden

4 July 1885.

Thee. Inclosed you
get some the flowers I
leaf yourself, I am
much for their re-
peated continuity, I de-
sentence, say you have
sent them (no calyx)
of a Brisbane Pacific
& leaf of Sarcophila
ulmis.

If they unfortunately
belong to the plant-
s you do not want.
Not the trouble
I am so not secure
Brisbane? after it.
